## **DISCLAIMER**

This work has been prepared by the National Conference of States on Building Codes and Standards, Inc. (NCSBCS). Neither NCSBCS, any member of NCSBCS, nor any person acting on behalf of any of them: (a) makes any warranty, express or implied, with respect to the use of any information, apparatus, method or process discussed in this report, or that such use may not infringe privately-owned rights; or (b) assumes any liabilities with respect to the use of, or for damages resulting from the use of, any information, apparatus, method or process disclosed in this report.

## **EXECUTIVE SUMMARY**

This report provides technical and administrative information on the status of seismic design and construction provisions adopted by state and local jurisdictions and of their enforcement.

Federal agencies must determine if state and local design and construction standards and practices provide adequate seismic safety when considering where to design and build Federal facilities in the United States. This document presents a compilation and summarization of building code adoption and enforcement data on the 50 states, the three U.S. territories, 186 of the largest local jurisdictions (all cities over 100,000 in population), and 1,164 other units of local government (county/city).

The methodology for selecting the points of contact is explained in detail in Appendix A. In short, the contacts were selected on the basis of population and seismic risk. All states had a minimum of five contact points; each of the three U.S. territories constitute one contact; and the 186 largest cities were each contacted. Twelve states had only the minimum five contact points since they were located entirely in Seismic Map Areas 1 and 2 (low seismic risk). Five states with relatively low populations had areas located no higher than Map Area 3 and were, therefore, allocated an additional contact point for each 500,000 of total state population. Sixteen states with higher populations, but with no areas higher than Map Area 3, were allotted an additional contact for every county in Map Area 3 with a population over 25,000. Additional contacts were then made in the metropolitan areas surrounding the 186 major cities if located in Map Areas 2 and 3. The remaining contact points were made in the U.S. counties that are located in Map Areas 4 through 7 according to a formula based on the seismic risk of the county and its population.

This user friendly report also contains step-by-step instructions on how to locate specific data on specific localities. It provides: 1) the building code in use; 2) the type of buildings to which the code applies and under what conditions; 3) the existence and extent of plan review services; 4) the existence and extent of inspection services; and 5) the qualifications of those personnel conducting plan review and inspection activities.

## **I. PURPOSE**

The purpose of this report is to provide information on the status of building codes with seismic design and construction provisions adopted by state and local jurisdictions. It also provides information on the enforcement of these provisions.

This report, along with another report, "Assessment of the Seismic Provisions of the Model Building Codes," has been prepared to assist Federal Agencies in evaluating the adequacy of local codes in content and enforcement. Such evaluations are required in order to implement Executive Order 12699, "Seismic Safety of Federal and Federally Assisted or Regulated New Building Construction".

## **II. BACKGROUND**

Building construction regulations have for centuries provided criteria directed at improving the health and life safety aspects of buildings. As the United States was settled, first local areas (cities, counties, municipalities, etc.) and then eventually states became involved in the regulation of building construction. As major catastrophes such as fires, floods, and earthquakes resulted in structural failures, comprehensive construction regulations (hereinafter termed building codes) were developed, adopted, and enforced where none had existed, or made more stringent than those already in effect.

Today, the authority to promulgate and enforce codes and regulations rests with the state government. The 10th Amendment to the Constitution of the United States reserves the exercise of police power to the states. The police power authorizes the states to establish and enforce rules to protect the health and safety of the public in the buildings they occupy.

Some states adopt codes that apply throughout the state (a statewide code) and by state law cannot be amended by local jurisdictions; in other states, local jurisdictions are allowed to amend the state code, usually to provide more stringent requirements. In both cases, enforcement of the codes is primarily the responsibility of local government. Further, some states adopt a building code which is voluntary or applies only to state-owned or funded buildings and leave other code adoption decisions to the local jurisdictions. And finally, a few states have granted all authority for code promulgation and enforcement to the local government.

The technical criteria that apply within various building codes also vary. Many building codes are based on any one edition of the three major model codes developed within the private sector, while other states and local jurisdictions develop their own codes and/or adapt and modify the model code provisions to fit their particular situations. Many of these state and local modifications and/or derivations are directed at unique climatic or geographic concerns. It is therefore easy to recognize that the technical criteria from state to state and, in some cases within states, will vary relative to seismic provisions.

Another essential aspect of building codes is their adoption and enforcement. Adoption relates to the manner in which a building code is applied to a particular project. In some instances, the code may only apply to state owned buildings. In others, it may apply to all new buildings and some existing buildings. Some jurisdictions apply only structural and life safety considerations and not mechanical or plumbing. Enforcement is the mechanism by which the criteria in the codes are deemed to be satisfied, both in the permitting stage and the actual construction stage.

Plan review and inspection functions are the two major components of code enforcement. Plan review determines if the building as designed and specified satisfies the building code. Inspection ensures that the actual construction is in accordance with the approved plans and, therefore, meets the building code provisions. The plan review and inspection phases of construction and the personnel who carry out these provisions are therefore critical to ensuring compliance with the approved plans and, ultimately, the building code.

Executive Order 12699 of January 5, 1990, "Seismic Safety of Federal and Federally Assisted or Regulated New Building Construction", seeks to reduce risks to persons and losses in public buildings due to earthquakes. The Executive Order is intended to further the goals of the Earthquake Hazards Reduction Act of 1977 which requires, among others, Federal activities that include development and promulgation of provisions to achieve appropriate earthquake resistance for new structures.

In accordance with OMB Circular A-119 of January 17, 1980, nationally recognized private sector standards and practices are to be used for the above purposes unless none is available that meet the requirements of the Federal agency. Executive Order 12699 states that when local building codes are determined by the responsible agency or by the Interagency Committee for Seismic Safety in Construction (ICSSC) to provide adequate seismic safety, they may be used. Consequently, it is necessary for each agency to know the status of code adoption and enforcement at the local level in order to determine adequacy for seismic safety to meet the above Federal directives.

To achieve full implementation of Executive Order 12699, Federal agencies must have the following information available by state or territory and local jurisdiction in order to determine if the design and construction standards provide adequately for seismic safety: 1) the building code in use; 2) the type of buildings to which the code applies and under what conditions; 3) the existence and extent of plan review services; 4) the existence and extent of inspection services; and 5) the qualifications of those personnel conducting plan review and inspection activities. In conjunction with the report on "Assessment of the Seismic Provisions of the Model Building Codes," this report will provide the information necessary for Federal agencies to make such a determination.

### **III. PROJECT OVERVIEW**

Contacting the 44,000 units of local government which enforce building codes is not necessary in order to provide information that will assist Federal agencies in implementing Executive Order 12699. Due to the prevalence of the use of the three model codes (NBC, UBC, SBC)\* by state and local government, there are not 44,000 different codes. Due to the similarity of state and local government enforcement, not all 44,000 conduct plan review and inspection differently. In addition, not all areas of the country have the same seismic risk nor the same population or construction at risk.

A rational approach to obtaining information and presenting it in a logical manner supports a review of state codes first. Where there was no state code, a review of the largest jurisdictions and other selected local jurisdictions in the state was appropriate. In other words, an evaluation was undertaken from the larger entities down to the smaller.

To address plan review and enforcement, state agencies and selected local jurisdictions in states having state codes were reviewed. In addition, the largest local jurisdictions and other selected local jurisdictions in states without a state code were addressed. This approach yields a credible and accurate portrayal of the code situation in a more timely and cost effective manner than the effort required to document this information for the entire country.

- \* NBC - National Building Code, published by Building Officials and Code Administrators (BOCA).
- UBC - Uniform Building Code, published by International Conference of Building Officials (ICBO).
- SBC - Standard Building Code, published by Southern Building Code Congress International (SBCCI).

The various tasks undertaken for this project are described below.

### TASK 1

States, territories, larger jurisdictions, and other units of local government were selected as the basis for the study. The study includes the 50 states, the three U.S. territories, 186 of the largest local jurisdictions (all cities over 100,000 population), and 1,164 other units of local government (county/city). A methodology was developed and applied so that some of the 1,164 selected were appropriately located relative to seismic risk and population at risk, while others were uniformly spread across the U.S. to establish a minimum baseline of regulatory activity.

### TASK 2

The codes for each of the states, territories, and the local jurisdictions selected in Task 1 were identified and reviewed. Where modifications were made to a model building code or the code was uniquely different from a model building code, the differing provisions were noted. Each entry can then be used (along with the report entitled, "Assessment of the Seismic Provisions of the Model Building Codes") to determine if the state or local provisions are technically adequate to provide for seismic safety using the model building code as a minimum baseline of reference. Throughout the report, where a state or local has adopted a model code, that adoption has been so noted.

### TASK 3

Based on the efforts conducted under Task 2, aspects of plan review and construction inspection were identified that are critical to seismic design and construction in accordance with the code. These aspects were translated into quantifiable issues, which were then used to obtain information on the way plan review and inspection activities are conducted and by whom, and the degree to which these activities vary by building type, occupancy, or ownership.

## TASK 4

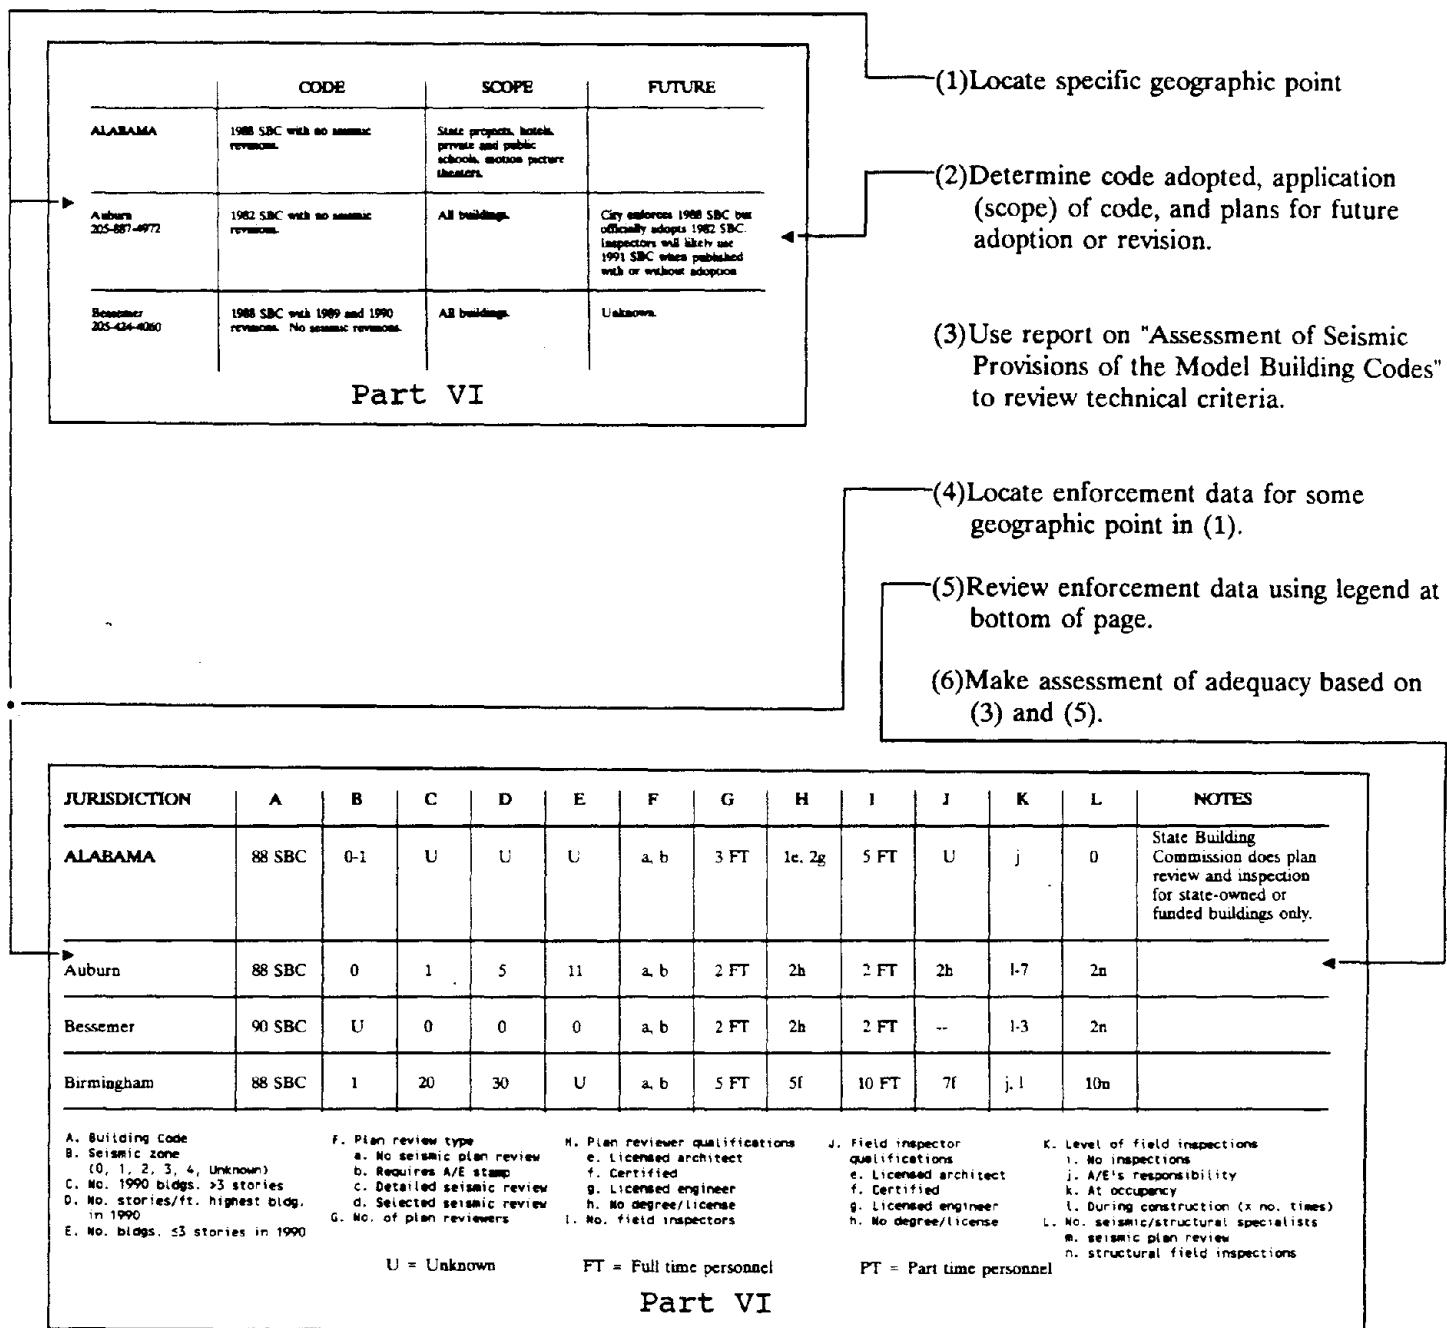

The 50 states, three U.S. territories, 186 largest jurisdictions (those over 100,000 in population), and 1,164 other local jurisdictions selected pursuant to Task 1 were contacted by phone, and enforcement information identified in Tasks 2 and 3 above was obtained. This information was compiled and prepared into a presentation on technical and enforcement issues associated with seismic design.

## USING THIS REPORT

Data on the codes and their enforcement are presented for 50 states, three U.S. territories, the 186 largest cities in the U.S., and 1,164 additional local jurisdictions. The methodology for picking cities which are representative of the U.S. is summarized in Part IV and provided in detail in Appendix A. The methodology for presenting the building code provisions is included in Part V. Part VI provides a compilation of those provisions alphabetically by state and then within each state by county and city for those local jurisdictions selected pursuant to Part IV, as well as the plan review and enforcement data from the jurisdiction.

To understand the code adoption and enforcement situation in a jurisdiction, locate the state, then county, or city beginning on page VI-3. If the city is not listed, use the county as a reference; if the county is not listed, use the state information. For state, county, or city data that refers to a model code, the report on "Assessment of the Seismic Provisions of the Model Building Codes" may be used to evaluate the adequacy of those state, county, or local codes. Figure 1 depicts how to use the report.

Figure 1

#### **IV. SELECTION OF STATES AND LOCALITIES FOR ASSESSMENT**

To determine whether seismic provisions of a state or local building code are adequate in content and enforcement required a technical review of such codes and some data related to plan review and construction inspection processes. Due to the level of effort required to contact every local enforcement agency in the U.S., it was necessary to develop a methodology by which local building regulatory agencies were selected to represent an appropriate cross section of the U.S.

All 50 states, three U.S. territories, and 186 of the largest local jurisdictions were required to be the subject of this study. In addition, 1,164 units of local government were also selected for consideration in the study. To represent an appropriate cross section of the U.S., the location of these 1,164 local jurisdictions required consideration of the following variables:

- Presence of a statewide code, which eliminates or minimizes the need to review a multitude of local codes, although an assessment of local enforcement of statewide codes is still necessary.
- Seismic risk, which suggests how much impact a code, or lack thereof, can have on building failures.
- Population, which relates the importance of the local building code to damage reduction on the assumption that population is a good indicator of construction and lives at risk.

Table 1 shows the ranking of major U.S. cities by population. There are 186 cities with populations over 100,000. Regardless of seismic risk, it was essential that these cities be contacted simply on the basis of population.

1/ The estimates shown here are for Honolulu census designated place, which is treated as the city by the Census Bureau, rather than the Honolulu city/county governmental unit.

2/ The estimates shown here are for Baton Rouge city, not the Baton Rouge/East Baton Rouge Parish government.

The selection of the 186 largest local jurisdictions is based on the estimated July 1, 1988, census data listed in Table 1. Throughout the remainder of this report, census data are typically based on 1980 figures because 1988 estimates and 1990 actual data were not available for use herein.

To appropriately target the 1,164 local contacts, a methodology was developed which weighed the population and seismic risk in order to determine the appropriate number of local jurisdictions to contact in each state. This was done by NEHRP (National Earthquake Hazards Reduction Program) Map Area and population. Table 2 delineates population and distribution of Map Area, based on the NEHRP map, by county for the 50 states, three U.S. territories, and the District of Columbia. Map Area, as used herein, should not be confused with Seismic Zone as used in the building codes. Figure 2 is included for general reference, with Map Area correlation to  $A_v$  as shown on the legend.

Figure 2  
Contour Map for Coefficient  $A_v$

NOTE: The actual NEHRP map is large enough to show the breakdown by county. The maps may be obtained from the Federal Emergency Management Agency, 500 C Street, S.W., Washington, D.C. 20472.

To allow for an appropriately weighted allocation of the 1,164 remaining local jurisdictions, the issues of seismic risk and population were addressed. Selecting an arbitrary number of contacts per state (e.g., 30) would not properly represent population or seismic risk. Selecting only jurisdictions in Map Area 7 would not be representative in any manner. A methodology was developed to provide an appropriate baseline of data throughout the U.S., regardless of seismic risk and population. In addition, the methodology provided for appropriate allocation of non-baseline contacts based on population and seismic risk. The local jurisdictions chosen pursuant to the methodology and included in this report are listed in Part VI where code and enforcement data are provided. The methodology by which they were selected is included in Appendix A.

## **V. METHODOLOGY FOR PRESENTING CODE ENFORCEMENT DATA**

### **STATE AND LOCAL ENFORCEMENT**

While the identification of code criteria, or model codes adopted, provides the basis for a quantitative determination of their adequacy when used with the report on "Assessment of the Seismic Provisions in the Model Building Codes," the enforcement of the code in the plan review and inspection stages of design and construction ensures that the technical criteria are satisfied. The adequacy of a particular code such as the Uniform Building Code is not only determined through a review of the technical criteria in the design stage but also a determination of compliance during construction. Identical buildings could be designed in different jurisdictions with the same seismic risk and yet not respond the same to seismic activity because of differences in enforcement during construction. A lower level of enforcement capability in one jurisdiction could affect the performance of the two structures during an earthquake. Clearly, there is a need to report on enforcement capabilities in the subject states and local jurisdictions in order to provide data with which Federal agencies can better determine whether the code is adequately enforced so as to implement the Executive Order.

The methodology must recognize that there are certain construction and personnel criteria which will help to put any reporting of enforcement capability in perspective. If no high-rise (>3 stories) buildings are constructed in the locality and very few low-rise commercial structures, the qualifications and/or number of plan review and construction inspection personnel may not be as critical as in an area with considerable commercial building construction.

The methodology for obtaining data upon which the enforcement of seismic provisions of building codes can be reported, therefore, focuses on three separate areas:

1. Construction demographics in terms of seismic zone, high-rise buildings constructed during 1990, and low-rise buildings other than one- and two-family dwellings constructed during 1990.

2. Plan review procedures and personnel.
3. Construction inspection procedures and personnel.

The following form was used to gather and report on such enforcement data.

Jurisdiction: \_\_\_\_\_ State: \_\_\_\_\_ County: \_\_\_\_\_ City: \_\_\_\_\_

Agency: Name: \_\_\_\_\_

Address: \_\_\_\_\_ Phone: \_\_\_\_\_

What building code are you enforcing: \_\_\_\_\_

Order Adopting Ordinance: \_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Received Date

1991 Plans for Revision of Code/Adopting Newer Edition \_\_\_\_\_  
\_\_\_\_\_

A. CONSTRUCTION DEMOGRAPHICS

1. Seismic Zone (0-4 in which model code?) \_\_\_\_\_ (circle: BOCA SBC UBC Other)
2. Number of buildings under construction during 1990 over 3 stories high \_\_\_\_\_.
3. Number of stories of highest building under construction during 1990 \_\_\_\_\_ stories.
4. Number of buildings under construction during 1990 not over three stories high other than one- and two-family dwellings \_\_\_\_\_.

B. PLAN REVIEW PERSONNEL

1. When conducting a plan review, do you:

\_\_\_\_\_ Review the plans for seismic design data? \_\_\_\_\_ Yes \_\_\_\_\_ No

\_\_\_\_\_ Require plans to be prepared and stamped by a registered architect/engineer? \_\_\_\_\_ Yes \_\_\_\_\_ No

**DO NOT ASK THE NEXT 2 QUESTIONS OR #2 BELOW IF THEY DO NOT REVIEW FOR SEISMIC.**

\_\_\_\_\_ Conduct a detailed review of seismic data submitted? \_\_\_\_\_ Yes \_\_\_\_\_ No

\_\_\_\_\_ Review only selected critical aspects of seismic data? \_\_\_\_\_ Yes \_\_\_\_\_ No

Do you do the same procedure for high-rise and low-rise buildings?

\_\_\_\_\_ Yes \_\_\_\_\_ No If no, explain difference: \_\_\_\_\_

2. How many plan reviewers conduct seismic review?

\_\_\_\_\_ Full time      \_\_\_\_\_ Part time      \_\_\_\_\_ Contract out

3. What are the qualifications of your plan review personnel?

FT  PT (No.) Are licensed architects.

FT  PT (No.) Are certified by \_\_\_\_\_  
Agency

FT  PT (No.) Are licensed \_\_\_\_\_ engineers.  
(Type)

FT  PT (No.) Have no degree or certification.

4. Of the plan review personnel above (in #2), how many also conduct field inspection?  FT  PT

C. INSPECTION PERSONNEL

1. How many field inspection personnel are there in the department?  FT  PT

2. How many of the above inspection personnel conduct structural inspections? \_\_\_\_\_

3. How often do you inspect the structural parts of a building?

No inspection

Architect's/Engineer's responsibility

Only at occupancy

At designated stages during construction, which is approximately how many times?

4. What are the qualifications of your inspection personnel.

FT  PT (No.) Are licensed architects.

FT  PT (No.) Are certified by \_\_\_\_\_  
Agency

FT  PT (No.) Are licensed \_\_\_\_\_ engineers.  
(Type)

FT  PT (No.) Have no degree or certification.

Contract out inspections.

## **VI. COMPILATION AND SUMMARIZATION OF BUILDING CODE CRITERIA AND ENFORCEMENT DATA**

### **BUILDING CODE CRITERIA**

Based on the Part V methodology, the enforcement criteria for seismic considerations in building codes were identified. Based on the selection of local contacts in Part IV, technical and administrative code provisions were obtained. Part VI presents the matrices for the seismic provisions of building codes and for the enforcement data in the 50 states and three territories as well as the 1,350 major cities, counties, and other local jurisdictions identified in Task 4. For ease of use, the data are presented in alphabetical order by state. Counties and cities reviewed in each state are listed alphabetically.

The Code entry for each geographic point identifies the title of the code criteria which are applicable and notes any relevant technical amendments which the state or local has adopted. If the state or local jurisdiction adopts the 1987 National Building Code without any relevant technical amendments, the code entry will read -- 1987 NBC with no seismic revisions. If minor relevant amendments are made, the entry will read -- 1987 NBC w/seismic revisions -- and the details of the technical amendments are included. If the state or local jurisdiction develops its own unique seismic provisions or has major relevant amendments to a model code, the entry will read -- unique or major amendments; see code. Combining this information with the technical specifics provides for an easy identification and presentation of the applicable technical provisions of the codes in each city, county, or town selected.

The Scope entry, regarding building type, is critical in determining how the technical criteria applies to new buildings. If the code applies to all new buildings, the scope entry would read -- all. If it applies to only state-owned buildings or public assembly buildings, the entry will so note.

The Future entry is intended to provide some projection into the likelihood of future code adoptions and the effective date of such adoption. This information is based on the historical code situation in the state as well as local adoption history. For instance, New Jersey typically adopts each BOCA supplement or new edition three to six months after publication, and the entry will therefore read -- adopt previous year's code in following year. Virginia, on the other hand, adopts only the full edition on the three-year cycle following the edition date and will therefore read -- 1993 NBC in 1994 & 1996 NBC in 1997. Where a state or local jurisdiction changes more frequently, such as Dade County, Florida or Kentucky, the frequency is noted -- updates monthly or quarterly.

In brief, the information is intended to direct the user to the applicable code, its scope, and future changes likely. If the jurisdiction makes major revisions to the code adopted, or if the jurisdiction promulgates its own code, the entry will so note. The telephone number in each entry is that for the code enforcement department in the jurisdiction. The code/scope/future matrix of each state is followed by the local enforcement data.

#### STATE AND LOCAL ENFORCEMENT DATA

The methodology for reporting on state and local enforcement was developed to provide data such that Federal agencies can better determine the level of enforcement of the building code. The focus was on construction activity and seismic risk and the number of qualifications of enforcement personnel. As presented in this part, that information can be used to make some evaluation of adequacy. For example, if a jurisdiction has a high seismic risk and much construction activity but little enforcement capability, then adequate seismic safety might not be provided. On the other hand, adequate seismic safety may be provided where the enforcement capability is high and the seismic risk and construction activity lower.

	CODE	SCOPE	FUTURE
<b>ALABAMA</b>	1988 SBC with no seismic revisions.	State projects, hotels, private and public schools, motion picture theaters.	
Auburn 205-887-4972	1982 SBC with no seismic revisions.	All buildings.	City enforces 1988 SBC but officially adopts 1982 SBC. Inspectors will likely use 1991 SBC when published with or without adoption.
Bessemer 205-424-4060	1988 SBC with 1989 and 1990 revisions. No seismic revisions.	All buildings.	Unknown.
Birmingham 205-254-2211	1988 SBC with no seismic revisions.	All buildings.	City will likely update to 1991 SBC when available.
Dothan 205-793-0161	1988 SBC with no seismic revisions.	All buildings except 1 & 2 family.	No revisions planned. Will likely adopt 1991 SBC when available.
Florence 205-760-6325	1988 SBC with no seismic revisions.	All buildings.	Unknown.
Huntsville 205-532-7475	1988 SBC with no seismic revisions.	All buildings.	Will likely adopt 1991 SBC when available, with no seismic revisions.
Madison 205-772-5600	1982 SBC with no seismic revisions.	All buildings.	Considering adopting 1988 SBC.
Mobile 205-434-7601	1985 SBC with no seismic revisions.	All buildings.	Considering adopting 1988 SBC.

Alabama (cont.)	CODE	SCOPE	FUTURE
Montgomery 205-241-2072	1988 SBC with no seismic revisions.	All buildings.	No plans.

	<b>CODE</b>	<b>SCOPE</b>	<b>FUTURE</b>
<b>FLORIDA</b>	1988 SBC with 1989 and 1990 revisions; or South Florida Building Code; or EPCOT code.	All buildings. Locals must enforce one of the state-sanctioned codes.	South Florida Building Code updated periodically. New edition of SBC will likely be adopted by 1992.
Broward County 305-765-4886	1990 Broward County edition of South Florida Building Code. No seismic provisions.	All buildings.	No set schedule for updating. Board meets monthly to approve interim amendments.
Dade County 304-375-2500	1988 Dade County edition of South Florida Building Code. No seismic provisions.	All buildings.	County hopes to adopt 1990 edition of South Florida Building Code in 1991.
Fort Lauderdale 305-761-5191	Broward County edition of South Florida Building Code.	All buildings.	Will adopt whatever Broward County adopts.
Fort Myers 813-332-6723	1988 SBC with 1989 and 1990 supplements. No seismic revisions.	All buildings.	No plans to update code during 1991.
Gainesville 904-374-2041	Local ordinance not received. Local personnel enforce 1988 SBC.		
Hialeah 305-883-5825	1988 Dade County edition of South Florida Building Code.	All buildings.	Will adopt whatever Dade County adopts.
Hollywood 305-921-3300	1990 Broward County edition of South Florida Building Code.	All buildings.	Will adopt whatever Broward County adopts.
Jacksonville 904-630-1100	1988 SBC with 1989 and 1990 supplements. No seismic revisions.	All buildings.	City will update to latest edition of SBC when available.

Florida (continued)	CODE	SCOPE	FUTURE
Miami 305-350-7957	Dade County edition of South Florida Building Code.	All buildings.	Will adopt whatever Dade County adopts.
Orlando 407-246-2277	1988 SBC and 1989 supplement with local amendments. No seismic revisions.	All buildings.	City will update to latest edition of SBC when available.
Sanford 407-330-5656	1988 SBC with no seismic revisions.	All buildings.	No plans.
St. Petersburg 813-893-7231	1988 SBC with 1989 revisions and no seismic revisions.	All buildings.	1991 SBC will be adopted in July 1991.
Tallahassee 904-599-8250	1988 SBC with no seismic revisions.	All buildings.	City plans to update code to include 1989 and 1990 SBC supplements.
Tampa 813-223-8306	1988 SBC with no seismic revisions.	All buildings.	No plans.

## APPENDIX A

The intent of this report is to provide information on seismic provisions for the 50 states and 1,600 local jurisdictions. This appendix provides the methodology by which the local jurisdictions covered by the report were chosen. As previously stated, all 50 states, three U.S. territories, and 186 largest U.S. cities were the initial contact points. The following methodology was developed to appropriately distribute the remaining 1,414\* local contacts based on population (risk to persons) and location on the NEHRP seismic map (seismic risk).

In order to establish a uniform baseline to understand the extent of seismic provisions and the enforcement thereof, it is important to gain some insight into local government within each state beyond the 50 state, three U.S. territory, and 186 major city contacts, regardless of seismic risk or population. For this reason, a minimum of five contacts were made in all states, including those low in population and area and those located entirely within low seismic risk areas.

This methodology, in states located entirely in Map Areas 1 and 2 (low seismic risk), yielded an additional 60 local contacts over state and major city contacts; the 12 states located only in Map Area 1 or 2 are Alabama, Louisiana, Texas, South Dakota, North Dakota, Minnesota, Wisconsin, Michigan, Ohio, Delaware, Maryland, and Florida. As a result, 1,354 local contacts (1,414 total local contacts minus 60 contacts in low seismic risk states) remain to be allocated in 38 states.

Based on relatively low population as shown in Table 2 beginning on page IV-7 of the report, and relatively low seismic risk (no part of the state appears in a Map Area above 3), the following states are considered adequately addressed through contacts to the 186 largest cities, the minimum five local contacts per state, and an additional one contact per 500,000 of total state population (the number of additional contacts appears in parentheses):

\* 1,414 local contact points were allocated by this methodology, but 1,164 local contacts are actually represented in this report. The difference between these two figures is the 250 selected jurisdictions that have no code enforcement mechanisms or that failed to respond to the survey and phone contact.

Iowa (6)	Rhode Island (2)
Maine (3)	Vermont (2)
New Hampshire (2)	

This yields 40 contacts in these five states (five contacts/state and 15 based on population) and leaves 1,314 to be allocated in the 33 remaining states.

A further consideration in this methodology is the existence of statewide mandatory codes. Such a document mandates seismic criteria for all jurisdictions throughout the state. For the purposes of this study, local enforcement procedures in these states affect the buildings constructed even though the code criteria are identical throughout the state, and therefore multiple local contacts are needed. Those states with statewide mandatory codes and which have relatively low seismic risk (no higher than Map Area 3) are as follows (the numbers in parentheses indicate counties in Map Area 3 and those in Map Area 3 with a population over 25,000):

Connecticut (8/8)	New Mexico (13/6)
Indiana (7/5)	New York (42/41)
Massachusetts (14/12)	North Carolina (37/25)
New Jersey (12/12)	Virginia (20/14)

This methodology establishes a county population of 25,000 as the minimum at which the study will consider population at risk to allocate local contacts in the remaining states. It is generally found that counties with a lower population have a limited commercial construction.

This county population consideration should not be confused with nor does it conflict with the one additional contact per 500,000 in the five low population states cited on page A-1 since the number of resultant contacts in each of those five states essentially covers any county  $\geq 25,000$  in population. The total local contacts in the above eight states, in addition to those for cities  $> 100,000$  in population, is 123 (the sum of the

numbers to the right of the slash in the parentheses). Subtracting these 123 contacts from the 1,314 remaining leaves 1,191 local contacts to be allocated among 25 states.

Before further allocation of local contact points, there are certain of the 186 major cities which are located in Map Areas 2 and 3 and warrant additional contacts in surrounding jurisdictions. Based on population and the existence or absence of a statewide code, the following additional local contacts for these metropolitan statistical areas (MSAs) situated in Map Areas 2 and 3 and located in states with a Map Area no higher than 3 were added:

Alabama - 1 in Birmingham and 1 in Huntsville

Minnesota - 2 in Minneapolis/St. Paul

Michigan - 2 in Detroit, 1 in Lansing, and 1 in Ann Arbor

Ohio - 2 in Columbus, 2 in Cleveland, 2 in Cincinnati, 2 in Toledo, 2 in Akron,  
2 in Dayton, 1 in Youngstown

Maryland - 2 in Baltimore

Iowa - 2 in Des Moines and 1 in Cedar Rapids

Rhode Island - 1 in Providence

Connecticut - 1 in Bridgeport, 1 in Hartford, and 1 in New Haven

Indiana - 2 in Indianapolis, 2 in Ft. Wayne, 1 in Gary, and 1 in South Bend

Massachusetts - 2 in Boston, 1 in Worcester, and 1 in Springfield

New Jersey - 2 in Newark and 2 in Jersey City

New York - 14 in New York City, 2 in Buffalo, 2 in Rochester, and 2 in Syracuse

North Carolina - 2 in Charlotte and 2 in Raleigh

Virginia - 2 in Richmond and 1 in Alexandria

Subtracting these 71 local contacts in major city MSAs from the 1,191 remaining yields 1,120 contacts to be allocated in the 25 remaining states.

The next eight states have no mandatory statewide code and are designated on the NEHRP map as no higher than Map Area 3. These states are as follows (the numbers in parentheses indicate the counties located in Map Area 3 and those counties with a population over 25,000):

Colorado (6/0)  
Georgia (67/23)  
Kansas (25/8)  
Nebraska (10/2)  
Oklahoma (30/15)  
Pennsylvania (19/18)  
South Carolina (48/36)  
West Virginia (4/0)

Since Colorado and West Virginia have no counties in Map Area 3 with a population over 25,000, this methodology suggests that they need not have any other contacts in addition to those already provided. In the remaining six states, the following major metro areas are located in Map Area 3 and warrant further contacts. The numbers in parentheses after each jurisdiction correspond to the population in thousands within the central city limits and the population in thousands outside the central city but within the metropolitan statistical area (MSA). The 11 jurisdictions checked () have already been contacted as major cities in the 186 cities over 100,000 in population.

### GEORGIA

- ✓Atlanta (425/1,604)
- Athens (42/87)
- Augusta (47/279)
- Albany (74/38)
- ✓Columbus (169/69)
- ✓Macon (116/136)
- ✓Savannah (141/89)

### NEBRASKA

- ✓Lincoln (171/21)

### KANSAS

- ✓Kansas City (161/365)
- ✓Topeka (115/70)
- Lawrence (52/14)

### SOUTH CAROLINA

- Anderson (27/105)
- Charleston (131\*/298)
- Columbia (101\*/309)
- Florence (30/80)
- Greenville/Spartanburg (58&43/466)<sup>1</sup>
- Rock Hill (35/71)

### PENNSYLVANIA

- North East PA (88 & 51/473)<sup>2</sup>
- ✓Philadelphia (1,688/3,028)
- Lancaster (54/307)
- Reading (78/233)
- ✓Allentown/Bethlehem (103&70/435)<sup>3</sup>

### OKLAHOMA

- ✓Oklahoma City (403/430)
- Fort Smith (71/131)
- ✓Tulsa (360/328)

<sup>1</sup> 58 & 43 apply to Greenville and Spartanburg, respectively.

<sup>2</sup> 88 & 51 apply to Scranton and Wilkes-Barrie, respectively.

<sup>3</sup> 103 & 70 apply to Allentown and Bethlehem, respectively.

The methodology requires that contact be made with the 17 central cities above that are not among the 186 major cities. Additional locales (cities and counties) in all 35 metro areas must also be contacted. Since all such areas are at the same seismic risk (Map Area 3), determining the number of contacts based on population is appropriate.

• Although population is over 100,000, these cities were not included in the 186 major city list due to census figure discrepancies.

Based on one contact for each 100,000 in population, or fraction thereof, in these 35 MSAs, and one for each of the 17 central cities not previously covered, 125 additional contacts were made as follows:

GEORGIA

Atlanta	17
Athens	2
Augusta	4
Albany	2
Columbus	1
Macon	2
Savannah	1

NEBRASKA

Lincoln	1
---------	---

KANSAS

Kansas City	4
Topeka	1
Lawrence	2

Charleston	4
Columbia	5
Florence	2
Greenville/Spartanburg	7
Rock Hill	2

PENNSYLVANIA

North East PA	7
Philadelphia	31
Lancaster	5
Reading	4
Allentown/Bethlehem	<u>6</u>
	125

OKLAHOMA

Oklahoma City	5
Fort Smith	3
Tulsa	4

At this point, 995 local contacts remain to be appropriately proportioned among the 17 states that follow:

Alaska	Illinois	Oregon
Arizona	Kentucky	Tennessee
Arkansas	Mississippi	Utah
California	Missouri	Washington
Hawaii	Montana	Wyoming
Idaho	Nevada	

Because of low population, only ten locales are being contacted in Alaska and Hawaii, and are as follows. (Note that Anchorage and Honolulu are already addressed among 186 major cities.)

Fairbanks (AK)	Ketchikan (AK)
Juneau (AK)	Palmer (AK)
Kenai (AK)	Hilo (HI)
Soldotna (AK)	Lihue (HI)
Sitka (AK)	Wailuku (HI)

The 985 local contacts that remain will be allocated in 15 states; all but one of these states (NV) have counties located in Map Area 3, which are addressed before focusing on counties in Map Areas 4 through 7. The numbers in parentheses below indicate the number of counties in Map Area 3 in each state and the number of those counties with a population over 25,000.

Arizona (5/3)	Missouri (13/6)
Arkansas (8/3)	Montana (13/3)
California (1/0)	Oregon (4/4)
Idaho (10/1)	Tennessee (40/23)
Illinois (21/6)	Utah (2/0)
Kentucky (12/6)	Washington (9/4)
Mississippi (8/4)	Wyoming (4/1)

Note that the following cities, located in the above Map Area 3 counties, have been addressed among the 186 major cities:

Kansas City, MO	Knoxville, TN
St. Louis, MO	Chatanooga, TN
Independence, MO	

For areas other than these five central cities, this methodology indicates that contacts are necessary in each Map Area 3 county with a population over 25,000. With one contact for each 100,000 in population, or fraction thereof, a total of 79 contacts (number of contacts in parentheses) are made in the following counties in 13 states (Utah is not included herein since no county in Map Area 3 has a population over 25,000):

WYOMING

Sweetwater (1)

Having determined the local contacts in Map Areas 1, 2, and 3, 906 contacts remain to be selected in 15 states with counties located in Map Areas 4 through 7, and are based on comparative seismic risk and population. An accounting of the remaining counties in those states by Map Area is as follows:

Map Area 7 - 56 counties  
Map Area 6 - 19 counties  
Map Area 5 - 107 counties  
Map Area 4 - 83 counties

The calculations used to determine the remaining local contacts are based on population and seismic risk. Note that the population of any of the 186 major cities covered at the beginning of this process has been deducted from the county in which the major city is located.

Equation 1 below is used to appropriately allocate these 906 remaining local contacts based on population and seismic risk of the affected county to the total population/seismic risk of all such counties.

$$\frac{[P \times A]_{cty}}{[P \times A]_{Total}} \times 906 = \begin{matrix} \text{Local contacts needed within county} \\ \text{(excluding any major city therein)} \end{matrix} \quad (\text{EQ 1})$$

Where:  $P$  = Population  
 $Av_c$  = Seismic coefficient of (county)  
 $Av_4$  = 0.15  
 $A$  =  $\frac{Av_c}{Av_4}$

The results of these calculations by county in the remaining 15 are shown in Table A-1.

**Table A-1**  
**Minimum Number of Local Contacts**  
**by Population and Seismic Risk (A)**

Table A-2 delineates the number of contacts proposed within the affected counties of each remaining state, based on the population/seismic risk calculations from Table A-1. The table is read horizontally by state; for example, AZ has 1 county with 2 proposed contacts, 1 county with 5 contacts, and 1 county with 10 contacts, while AR has 17 counties with 1 proposed contact and 3 counties with 2 contacts. The numbers in parentheses in the >10 column indicate the total number of contacts in those counties.

**Table A-2**

No. of Contacts per County	Number of Counties Grouped by No. of Contacts/County										Total Contacts	
	1	2	3	4	5	6	7	8	9	10

This methodology designated 1,414 local contacts across the United States based on population and seismic risk but inclusive of jurisdictions with low population and/or low seismic risk. The approach provides a logical and defensible allocation of contact points with which to gain insight into the code adoption and enforcement environment in any area of the U.S.

It is important to understand that this methodology was developed to objectively select the number of local contacts to be made based on population and seismic risk of U.S. counties. The actual number of local jurisdictions (units of local government) within a county may well be less than the number of contacts suggested by the methodology. It is equally important to recognize that some jurisdictions yield authority for code adoption or enforcement to other governmental entities (other municipalities or counties) so no information will be available. Once contact was made with, and data acquired from, the local jurisdictions selected for this study, any surplus of local contacts resulting from the scenarios described above was re-allocated to areas deemed to be under-represented. A number of local jurisdictions failed to respond to phone and mail contact. As a result, a total of 1,164 local contacts are successfully represented in this report.

11. ABSTRACT (A 200-WORD OR LESS FACTUAL SUMMARY OF MOST SIGNIFICANT INFORMATION. IF DOCUMENT INCLUDES A SIGNIFICANT BIBLIOGRAPHY OR LITERATURE SURVEY, MENTION IT HERE.) <p>The purpose of this report is to provide information on the status of building codes with seismic design and construction provisions adopted by state and local jurisdictions. It also provides information on the enforcement of these provisions. Building code adoption and enforcement data is included for 50 states, three U.S. territories, 186 of the largest local jurisdictions (all cities over 100,000 in population), and 1,164 other units of local government(county/city).</p> <p>This report, along with another report, "Assessment of the Seismic Provisions of the Model Building Codes," NIST GCR 91598, has been prepared to assist Federal agencies in evaluating the adequacy of local codes in content and enforcement. Such evaluations are required in order to implement Executive Order 12699, "Seismic Safety of Federal and Federally Assisted or Regulated New Building Construction."</p>
